High	114 (36.1)	2.88 (1.27, 6.54)	3.49 (1.34, 9.11)	.01

<sup>&</sup>lt;sup>a</sup> Out-of-home caregiving intensity refers to the number of caregiving activities that the respondent endorsed: assisted care recipient with independent activities of daily living in past three months, assisted care recipient with health-related tasks in past three months, discusses health with care recipient usually or always in conversations, conversed with care recipient's doctors in past year, and advised care recipient about questions to ask health care provider in past year. This measure was scored as very low (1), low (2), moderate (3), and high (4-5).

b Caregiver's comfort with technology is measured using the sum of technology modalities or tasks with which the respondent feels comfortable (including computers, the Internet, email, text messaging, and learning new programs on a computer or the Internet). This measure was scored as very low (0), low (1-2), moderate (3-4), and high (5).
